+1 (587) 986-9077 | samad.z@outlook.com | [in](#) samad-zeeshan | [G](#) samad-zeeshan | [P](#) Portfolio | Edmonton, AB

EDUCATION

University of Alberta

Bachelor of Science, Computing Science

Edmonton, AB

Sep. 2021 – Jun. 2026

- **Relevant Coursework:** Software Engineering, Data Structures & Algorithms, Machine Learning, Natural Language Processing, Search & Planning in AI, Databases, Operating Systems, Web Applications & Architecture

EXPERIENCE

iTechArabian

Software Engineering Intern

Dubai, UAE

Summers 2023, 2024 & 2025

- Built LLM-powered customer-support chatbots across ~20 client websites, grounding each in the client's own FAQ and service content and deflecting ~40% of routine inquiries before they reached staff.
- Developed an AI-assisted demand-forecasting feature for a 3-hotel group's inventory system, cutting forecast error ~15% versus manual estimates.
- Built an LLM content-generation service for client marketing teams, reducing manual copywriting time; shipped on an Agile team through peer code review.

PROJECTS

Triage-0.6B | Python, LoRA, Knowledge Distillation, GGUF

GitHub | 2026

- Fine-tuned Qwen3-0.6B with LoRA and knowledge distillation from a DeepSeek teacher, raising ticket priority-classification accuracy from 38% to 87% on 1,200 held-out tickets.
- Exported to GGUF and served fully offline on a consumer GPU (RX 6750 XT, Vulkan) via LM Studio, removing any inference-time API dependency.

Change-Gate | Python, LangGraph, MCP, OAuth 2.1, PostgreSQL

GitHub | 2026

- Built a LangGraph policy gate that routes every configuration or access change through deterministic, versioned risk rules before model judgment; secured with OAuth 2.1 (Keycloak) and Postgres row-level security, covered by 79 tests in CI.
- Exposed it as an MCP server on the official Anthropic Python SDK: nine tools over streamable HTTP behind a JWKS-verified resource server with per-tool scopes, plus the matching MCP client.
- Added an environment-gated explainer that renders each decision as prose with Claude, held strictly outside the scoring path so the model never affects a risk score or verdict.

Docket | TypeScript, AWS CDK, Lambda, DynamoDB, Bedrock

GitHub | Demo | 2026

- Built an event-driven serverless receipt pipeline in AWS CDK (S3, EventBridge, SQS/DLQ, Lambda, DynamoDB) with schema-gated LLM extraction, idempotent writes, and PII redaction; deployed and validated end to end on a live account, then torn down.
- Gated CI on a field-level eval scoring 0.999 over a 42-receipt golden set; 111 tests including cdk-nag policy checks and CDK template assertions.
- Wired CloudWatch dashboards and alarms to SNS, X-Ray tracing, and an AWS Budgets cap, with DLQ redrive backed by a runbook and keyless deploys via GitHub OIDC.

Tarn | Python, PySpark, dbt, DuckDB, Neo4j, FAISS

GitHub | Demo | 2026

- Built a PySpark lakehouse over 1.05 billion authentication events (rolled up to 1.6 million identity-days) and optimized the Spark rollup 22.3% on a 113.7M-row slice by sharing a materialized dedup grain, committing the rejected hypothesis alongside it.
- Modelled a dbt/DuckDB star schema with tested keys and shipped five analytical queries, plus a Spark Structured Streaming job from Kafka with checkpoint kill/resume recovery.
- Loaded 600,145 authentication edges into Neo4j for Cypher privilege-path queries and indexed 1.6 million behavioural embeddings in FAISS, proving blast radius saturates against a benign control group.

TECHNICAL SKILLS

Languages: Python, TypeScript, Java, Go, C++, SQL, JavaScript

Frameworks & Libraries: LangGraph, MCP, FAISS, PySpark, dbt, FastAPI, React, Node.js, Pydantic, Zod

Tools & Platforms: AWS (CDK, Lambda, DynamoDB, S3), Amazon Bedrock, PostgreSQL, DuckDB, Neo4j, Kafka, Docker, Git, GitHub Actions, Linux
